NIRAV SHAH

MOUNTAIN VIEW, CA — (984) 683-2844 — niravsshaha@gmail.com — linkedin.com/in/niravsshaha2

SUMMARY

Software Engineer with 4+ years of experience building batch and streaming pipelines on GCP and Azure. At Yahoo, cut core pipeline cloud cost 94% (saving $150K+/month), maintained 50+ pipelines and 5B+ events/day at 99.9% SLA, and led an 8-engineer migration to Cloud Composer. Promoted to SDE II within 2 years.

EXPERIENCE

Yahoo - Software Development Engineer II Mar 2026 - Present

- Led migration of 5 core event pipelines from Pig on Dataproc to 3 partitioned BigQuery SQL jobs, cutting cloud cost 94% ($161K to $9K/month) and runtime 85%; authored the design doc reused for later migrations.
- Built a near real-time GA4 streaming pipeline on BigQuery and Airflow processing 4M views/hour at 10-minute freshness for $1.2K/month, used by 100+ dashboard users across 10+ Yahoo teams.
- Diagnosed a data quality defect inflating engagement rate 28% for Yahoo News/Homepage and Yahoo Sports, tracing 884K phantom sessions to GA4 event logic and filtering them out in the content ETL.
- Restored content attributes for 85% of real-time hourly views after an upstream source was retired; built, deployed, and validated a Apache Beam Dataflow fix that permanently moved enrichment to the new source.

Yahoo - Software Development Engineer I Feb 2024 - Feb 2026

- Led a team of 8 engineers migrating batch workflows from on-prem Oozie and Kubernetes to GCP Cloud Composer, redesigning Oozie ETL workflows to scalable Airflow DAGs and cutting peak runtime 20%.
- Maintained 50+ batch and streaming pipelines (Pub/Sub, Kafka, Storm; 5B+ events/day) at 99.9% SLA as on-call owner, integrating OpsGenie alerting with Airflow and cutting incident response time 50%.
- Engineered BigQuery ML (ARIMA) anomaly detection across 30 content and video KPIs, catching 10+ anomalies in 3 months, including a homepage URL misroute fixed in 5 hours; design doc adopted by 2 teams.

Yahoo - Software Engineer Intern May 2023 - Aug 2023

- Built a query benchmarking tool using a REST API to tag BigQuery jobs, with a UI to benchmark multiple date ranges storing runtime stats in Spanner, flagging 50 slow queries behind 7+ API endpoints.

Honeywell - Software Development Engineer Oct 2020 - May 2022

- Engineered Spark/Databricks batch pipelines loading 100+ chemical plant params from PI Historian to Azure Data Lake at 70% lower latency, feeding Tableau and Power BI dashboards that cut resolution time 40%.
- Developed AutoML and time-series ML models on process parameters that recommended optimal plant settings and predicted equipment failures, contributing to a 5% manufacturing throughput gain.

PROJECTS

Reliable FTP & P2P Sharing (C++, Linux, TCP/UDP): Built Go-Back-N ARQ over UDP with ACKs and retransmission; designed a TCP protocol with a multi-threaded server for concurrent peer lookups and transfers.

CityByte (Python, Django, Linux, Multithreading): Designed a multi-threaded service with a thread pool for concurrent I/O-bound API requests and a thread-safe in-memory cache, cutting response latency 50%.

Expertiza: Open-Source Peer Assessment (React, Ruby on Rails): Built React frontend and Ruby backend modules using object-oriented design patterns, improving maintainability and reducing code complexity.

EDUCATION

North Carolina State University (Master of Computer Science) **GPA: 4.0/4.0** Aug 2022 - Dec 2023
Pune Institute of Computer Technology (B.E. in Computer) **GPA: 8.99/10** Aug 2016 - May 2020

TECHNICAL SKILLS

Languages:	Python, SQL, Java, C, C++, JavaScript
Cloud:	GCP (BigQuery, Dataflow, Composer, Spanner), AWS, Azure (Databricks, Data Lake)
Data Engineering:	Airflow, ETL/ELT, Pub/Sub, Kafka, Storm, Apache Spark, Hive, Hadoop
DevOps:	CI/CD, Terraform, Docker, Kubernetes, Jenkins, GitHub Actions, Git, pytest
BI & Monitoring:	Looker (LookML), Tableau, Power BI, Rootly, BigPanda, OpsGenie
